PROJECTS

Local database hosting (Final Year Project)

Node Js, Next Js, Electron Js , GraphQL and Firebase

A complete suite of software designed to provide benefits to the developers' communities by allowing developers to utilize their own local databases as hosted databases for sharing purposes or remote access. It Along with this, it removes the need of creating and hosting an API for accessing simple crud operation-based data from MySQL databases. The suite includes a NEXT Js based web-portal, Electron Js-based desktop Application, and our own published Npm packages.

Facebook clone

Express Js, React Js, Material UI, Firebase Authentication services and real time database.

This is a Facebook clone web application. Its front is designed in react js by using material UI. And back-end is developed using express js and the integration of firebase services like authentication and real-time database. You can make a post, comment on that, view your profile, send friend requests, edit your profile, etc.

Charity distribution app (Block-chain)

Web 3.0, Node Js , Geth Client, Flutter, Solidity and Firebase

It's a mobile application developed on the flutter framework. Application has a private block-chain, create with Geth client, for managing the charity transactions based on contracts written in solidity. Application is a complete demo to represent the core concept and functionalities of web3.0 and block-chain concepts and operations.

Distributed Rock-Seizor-Paper Game

Andriod and networking

It's a java based application that is designed and developed in way both players can play on their mobiles and communication will be done through wifi-direct connection.
